

Associated Security Services Ltd
Making your security our priority

Associated Security Bespoke Solutions

Associated Security Services customers benefit from our research and development expertise, which has provided numerous security innovations and bespoke ranges of everything from safes to strong rooms and interlocking door systems for banking, leisure and the retail sector.

Case study—A high street retail consortium approached us for a solution to the problematic and vulnerable time of the daily cash collection and delivery. We visited sites, carried out surveys and collected feedback from staff. From this information we were able to design a brand new safe that removed the risk of the cash in transit collection/delivery, as well as maintaining the footprint and time delay feature of their previous safe. Subsequent to positive feedback a rollout programme followed and the safe has since been taken up by and modified for other industries.

Below is the same safe that has been customised to the specification of three different customers:

Strong Rooms

Vaults or demountable strong rooms are our speciality and no two customers require the same strong room solution. We can design, manufacture and fit any size of vault to your specifications, taking in to consideration desired shape, total size and location of door.

Interlocking Door Systems

Automation and interlock systems provide safe and convenient means of accessing rooms in a controlled environment.

These bespoke systems can be applied to any number of doors from two doors to an entire building. Doors can be hinged, sliding, roller, manual or automatic, or any combination and access can be by push button, keypads, swipe cards, sensors, keys or any combination of these. Doors can also be interlinked, interlocked or sequenced.

We can create connections to many types of activation devices from basic push button to a fully integrated building management system.

These are just three examples of bespoke solutions we can develop for our customers. To find out how your business could benefit from our team of designers and developers, whatever your security requirement, call us today.
