

## AsSec Deposit Facility Safes

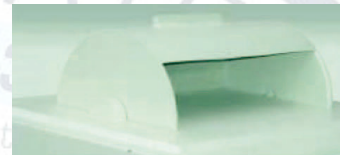

Sales staff handling cash or with access to a cash drawer, cupboard or safe are particularly vulnerable in an attack but with a deposit feature, the staff are relieved of the responsibility of the handling and storage of cash.

### Drawer Traps

The drawer trap consists of a lockable drawer built into the safe where deposit packages are placed. On closing the drawer the bottom drops, releasing the package into the safe. The drop is controlled so that there is no access to the inside of the safe once the bottom of the drawer has lowered. Anti-fishing devices are built into the drawer, preventing the retrieval of the deposit. Finished in RAL 9002.

### Rotary Trap

Deposits slide into the mouth of the trap which is then rotated using the handle to deposit packages in to the safe. The weight of the trap automatically returns it to the starting position. This trap includes an 'anti-fish' plate to prevent unauthorised retrieval of deposits. A key lock is also available to prevent unauthorised deposits being made. Finished in RAL 9002.
