Making your security our priority

## ELECTRONIC ACCESS CONTROL FOR SECURITY DOORS

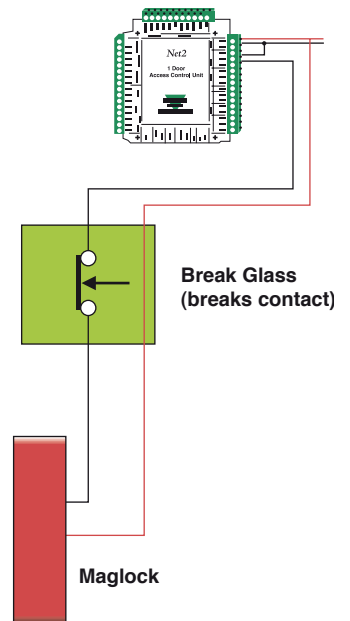

- Locking Options include magnetic locks, solenoid bolt and electronic strikes
- Access gained via keypad, swipe card, proximity reader or fob
- Self sufficient stand alone units or computer based
- Systems available with time out zones and audit trail facility

Access control system with fail safe Break Glass. In normal use the access control system decides who is granted access through the door.

In the event of a fire, anyone can open the door by breaking the glass on the emergency exit Break Glass. This cuts the power to a Maglock or other fail safe lock fitted to the fire escape door.

If a door contact is fitted an alarm can be annunciated if the break glass is operated and the door opened illicitly.
